

REPAIR SPECIALISTS

Ellerbusch Instrument Service LLC is the 3rd generation for Ellerbusch in Cincinnati. We were founded as a repair shop and our business is based on expert service. We specialize in the cleaning and repairing of your surveying equipment – their proper performance is our business. Proper alignment with periodic alignment checks when needed insure you of the most satisfaction from your surveying equipment. Our service department is equipped to handle all of your repair needs.

Ellerbusch Instrument Service repairs: Berger, David White, Pentax, Path, Lietz/Sokkia, K & E, Seiler, Nikon, Gurley, Fennel, Brunson, Kern, Zeiss, Wild/Leica, Watts, Dietzgen, Geodimeter, and Topcon instruments.

The following procedures are normally followed in our service department:

1. Basic check and adjustment:

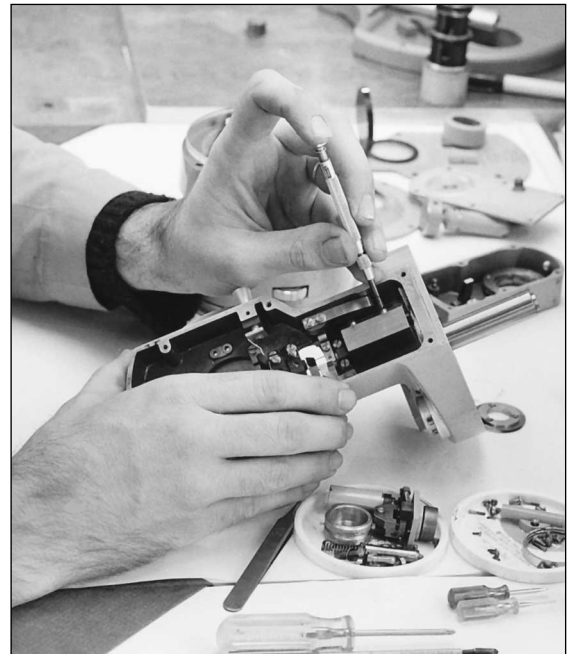

Inspection is made to check mechanical and optical parts. Minor repairs and cleaning are made and the instrument is calibrated.

2. Damage or extensive wear:

Frequently occurs when the instrument is dropped, knocked over, or has not been serviced in a long time. Dis-assembled as required, damaged parts repaired or replaced, re-assembled with factory lubricants, and calibrated.

3. Complete overhaul:

There are many moving parts in a builders / surveyors instrument. These parts are manufactured to precise tolerances. After years of use dirt gets into these parts, and the lubricants dry out. In this situation we completely dis-assemble the instrument, clean it in an ultra-sonic de-greaser, reassemble with factory lubricants and calibrate.

We fully guarantee all repair work done. An estimate of repair costs can be provided before work is started, and a complete breakdown of work completed is supplied with each repair job.
